Chapter 2 **INSTALLING THE UTILITYMODULE**

Since the utilityModule uses a PC/104 stackthrough bus, the only hardware installation you will do is placing the module to the PC/104 stack. To do this, you will connect the PC/104 bus connector with the matching connector of another module.

Recommended Procedure

We recommend you follow the procedure below to ensure that stacking of the modules does not damage connectors or electronics.

- Turn off power to the PC/104 system or stack.
- Select and install standoffs to properly position the utilityModule on the PC/104 stack.
- Touch a grounded metal part of the stack to discharge any buildup of static electricity.
- Remove the utilityModule from its anti-static bag.
- Check that keying pins in the PC/104 bus connector are properly positioned.
- Check the stacking order: make sure an XT bus card will not be placed between two AT bus cards, or it will interrupt the AT bus signals.
- Hold the utilityModule by its edges and orient it so the bus connector pins line up with the matching connector on the stack.
- Gently and evenly press the utilityModule onto the PC/104 stack.

CAUTION: Do not force the module onto the stack! Wiggling the module or applying too much force may damage it. If the module does not readily press into place, remove it, check for bent pins or out-of-place keying pins, and try again.

Chapter 3 CONNECTING THE UTILITYMODULE

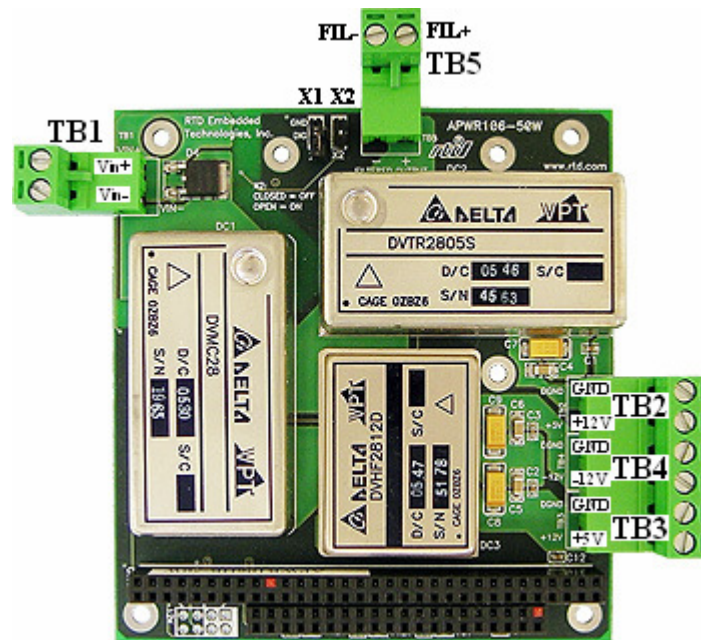

The following sections describe connectors of the utilityModule.

Finding Pin 1 of Connectors

Pin 1 of connectors is indicated by a square solder pad visible on the bottom of the PC board.

Component Locations

The figure below shows locations of major components, including connectors.

Connector	Function	Dimension
CN1	XT PC/104 bus	64 pin
CN2	AT PC/104 bus	32 pin
TB1	16-50 VDC Input	2 terminal
TB5	Filtered Vout Output	2 terminal
TB3	+5 VDC Output	2 terminal
TB2	+12 VDC Output	2 terminal
TB4	-12 VDC Output	2 terminal

PC/104 Bus Connectors, CN1 and CN2

Connectors CN1 and CN2 provide PC/104 bus connections. CN1 carries XT bus signals, and CN2 carries additional signals for the AT bus. The signals on CN1 and CN2 conform to the IEEE P966 standard for the PC/104 bus. The APWR106 series power only supplies the +5V, 0V (Gnd), +12V and -12V pins. All other pins are not connected.

The following tables list the connector pinouts:

PC/104 XT Bus Connector, CN1		
Pin	Row A	Row B

Note: Two locations on the bus have mechanical keying pins to help prevent misconnection of the PC/104 bus. These keying pins are a part of the PC/104 standard, and we strongly recommend you leave them in place.

If you have other modules without keying pins, we suggest you modify them to include keying.

+16 – 50 VDC Input, TB1

Terminal block TB1 is the input power connection for the APWR106. The input range is 16 - 50 VDC. Fully loaded this input can require 10 amps, therefore 18 gauge wire is recommended.

Pin	Signal	Function	in/out
1	Vin +	+16 – 50 VDC input	in
2	Vin -	Ground input	in

Filtered Vout Output, TB5

Terminal block TB5 is the output of the filter. This is 4 Amps on the APWR106HR-50W.

Pin	Signal	Function	in/out
1	Vout+	Filtered Vout	out
2	Ground	Ground	out

+5 VDC Output, TB2

The +5 VDC output is supplied to the +5 V pins on the PC/104 bus and to terminal block TB2. This supply is capable of providing 6 amps total that is shared by the PC/104 bus devices and any devices connected to TB2.

2	Ground	Ground	out

+12 VDC Output, TB3

The +12 VDC output of the APWR106HR-50W is supplied to the +12 V pins on the PC/104 bus and to terminal block TB3. This supply is capable of providing 1.17 amps total that is shared by the PC/104 bus devices and any devices connected to TB3. Note that the total power drawn from the +12 VDC and the -12 VDC supplies together cannot exceed 20 watts.

Pin	Signal	Function	in/out
1	+12 VDC	Regulated +12 VDC Output	out
2	Ground	Ground	out

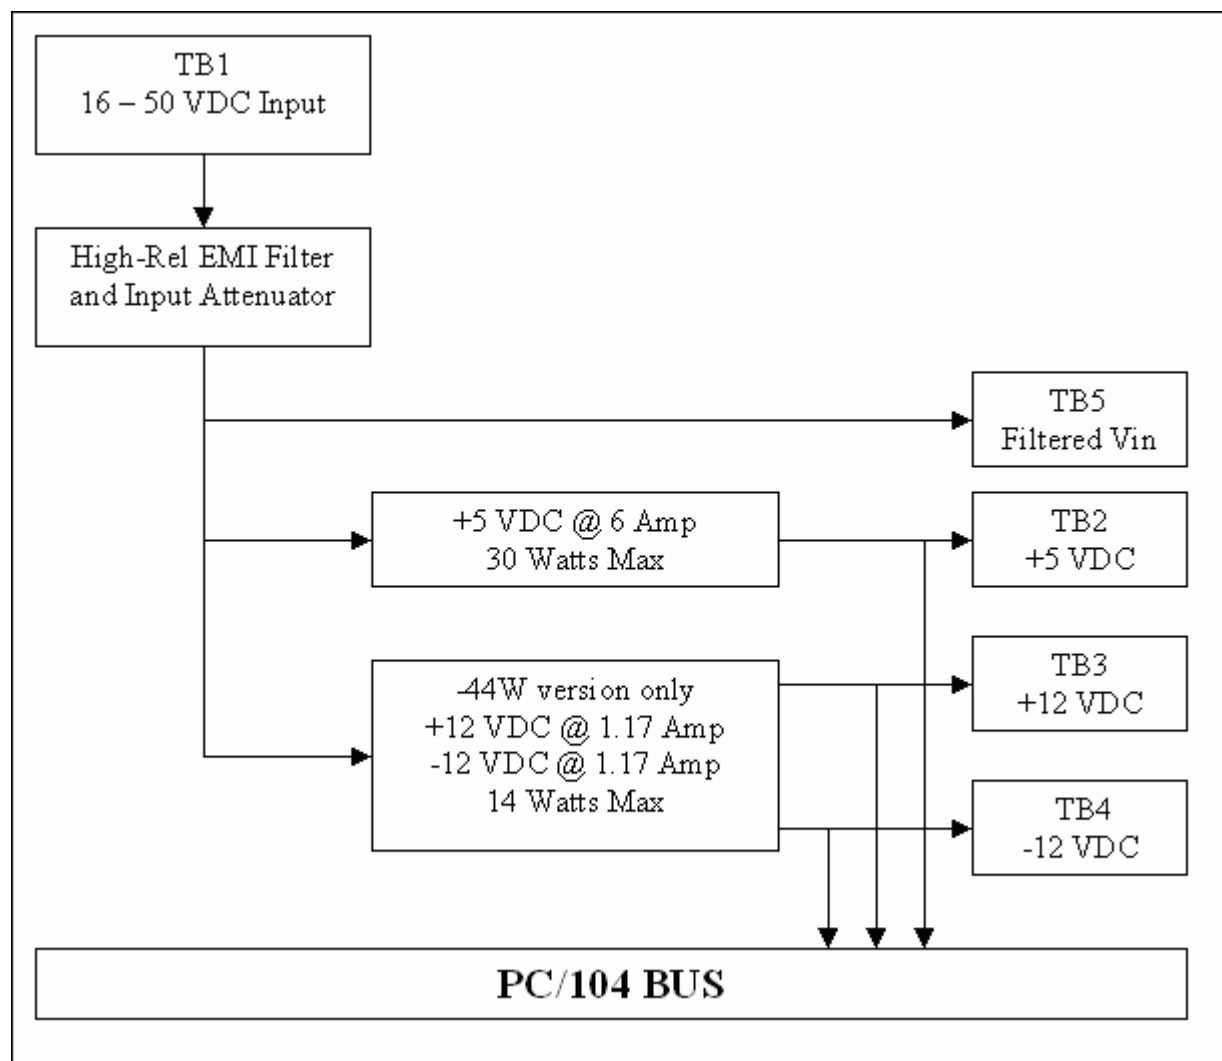

-12 VDC Output, TB4

The -12 VDC output of the APWR106HR-50W is supplied to the -12 V pins on the PC/104 bus and to terminal block TB4. This supply is capable of providing 1.17 amps total that is shared by the PC/104 bus devices and any devices connected to TB4. Note that the total power drawn from the +12 VDC and the -12 VDC supplies together cannot exceed 20 watts.

Pin	Signal	Function	in/out
1	+12 VDC	Regulated +12 VDC Output	Out
2	Ground	Ground	Out

Chapter 4 USING THE UTILITYMODULE

Using the utilityModule is straightforward. Connect the input to TB1 using good wiring practices keeping the wires as short and as heavy as possible. The +5 VDC is provided. Below is the block diagram:
